

产品型号: LA3219H-B

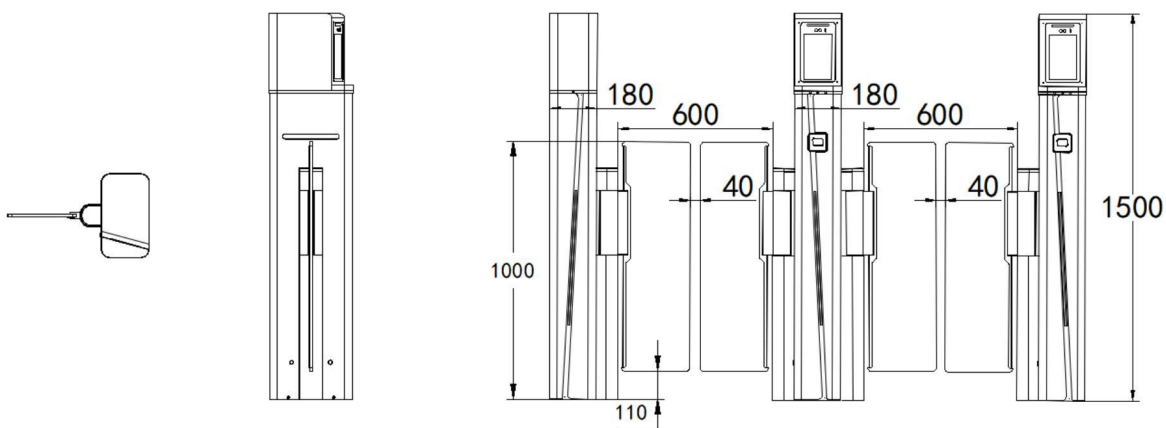

LA3219H render

Functional

- 1. Well-designed and reliable, with low noise, smooth operation, and a long service life
- 2. Features anti-tailgating and anti-backward intrusion protection
- 3. The card swipe can be set to either "with memory" or "without memory" function.
- 4. Features an automatic reset function, meaning that after obtaining passage authorization, if the gate is not used within the set time period, the gate machine automatically returns to the locked state.
- 5. Equipped with infrared anti-pinch and obstacle rebound functions (anti-pinch protection is active during barrier operation)
- 6. Compatible with IC, ID card scanning, and facial recognition, among other identification methods
- 7. Available in two operating modes: normally open or normally closed
- 8. Offers multiple operating modes, supporting bidirectional card reading as well as one-way card reading.
